

# Week 13 - Create an Exam Practice Question

Louis Botha, `louis.botha@tuni.fi`

*Exams | Buckinghamshire New University*

## Briefing

Create an exam question and implement the solution that will test the knowledge of what was taught during the course.

## Question

Should have clear instructions for what is desired and what is going to be tested. If the implementation need to use a specific library for example, it need to be mentioned.

The questions should be broad enough, for example, a question where the solution is just one method which counts 2 integers together is not broad enough.

You may focus on testing a specific area or you may cover many areas with the question

You can work together in teams.

## Exercise Pool

The ::slack: channel [exam-practice-questions](#) will serve as the pool to gather all the questions. Post your question as well formatted text in the channel.

The ::slack: channel [exam-practice-solutions](#) will serve as the pool to gather all the solutions. Post your solution as a zip package in the channel.
