

# Installation of Java and Set Environment Variable

For installation of Java and setup environment variables for Windows Operating we have **3 steps**. These steps are blew:

1. Download JDK exe file from this link: [https://download.oracle.com/java/20/latest/jdk-20\\_windows-x64\\_bin.exe](https://download.oracle.com/java/20/latest/jdk-20_windows-x64_bin.exe)
2. Install Java JDK.
3. Set up the Environment path for windows.

## 1. Download JDK

Go to this link: [https://download.oracle.com/java/20/latest/jdk-20\\_windows-x64\\_bin.exe](https://download.oracle.com/java/20/latest/jdk-20_windows-x64_bin.exe) and download JDK exe file.

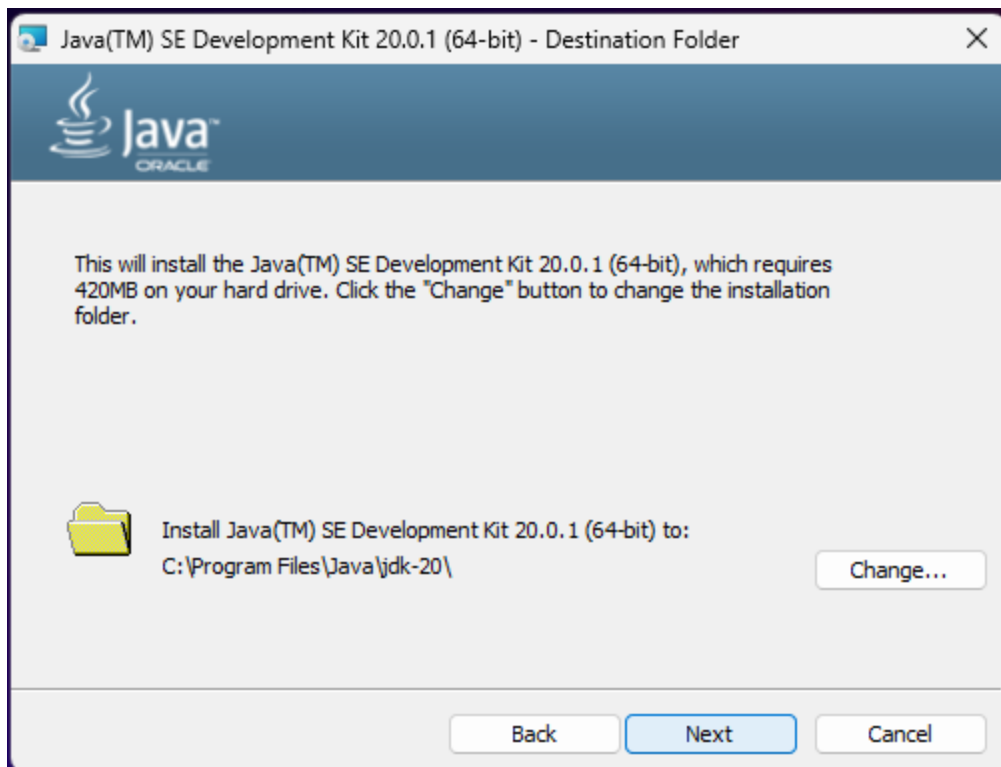

## 2. Install JDK

Follow these steps to install JDK on windows:

1. Double Click on JDK file.
2. After giving Administer Permission an install window will popup.

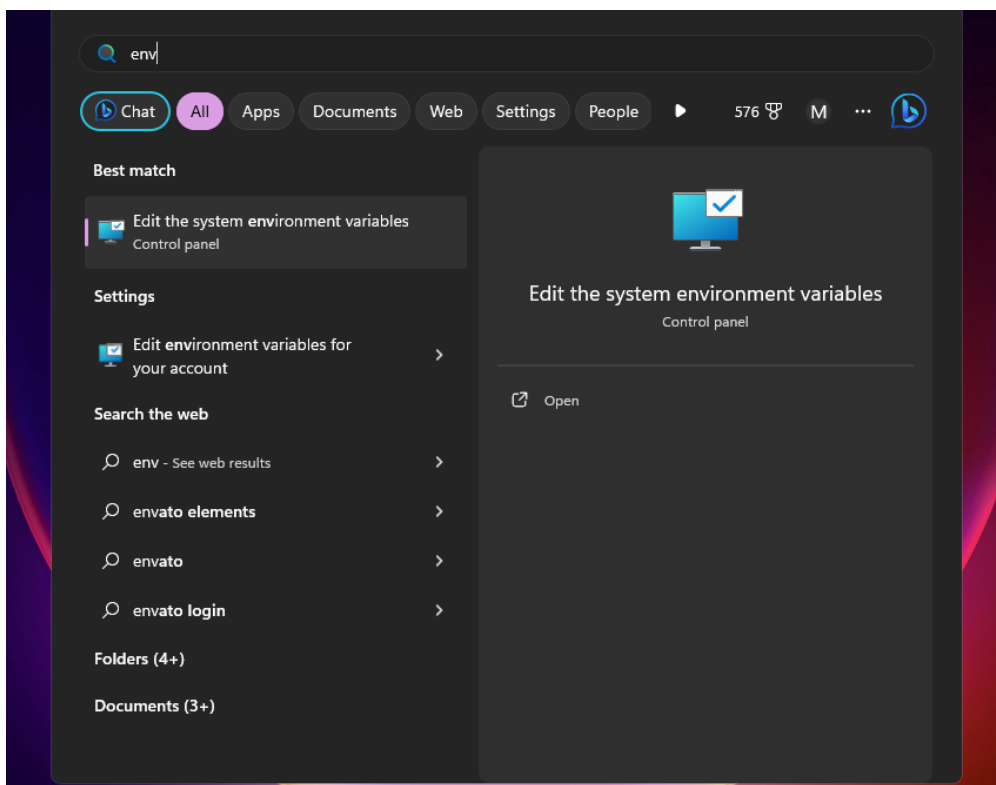

3. Click on next button for proceed.
4. This is the installation location. Remember this path. It will need in next step.

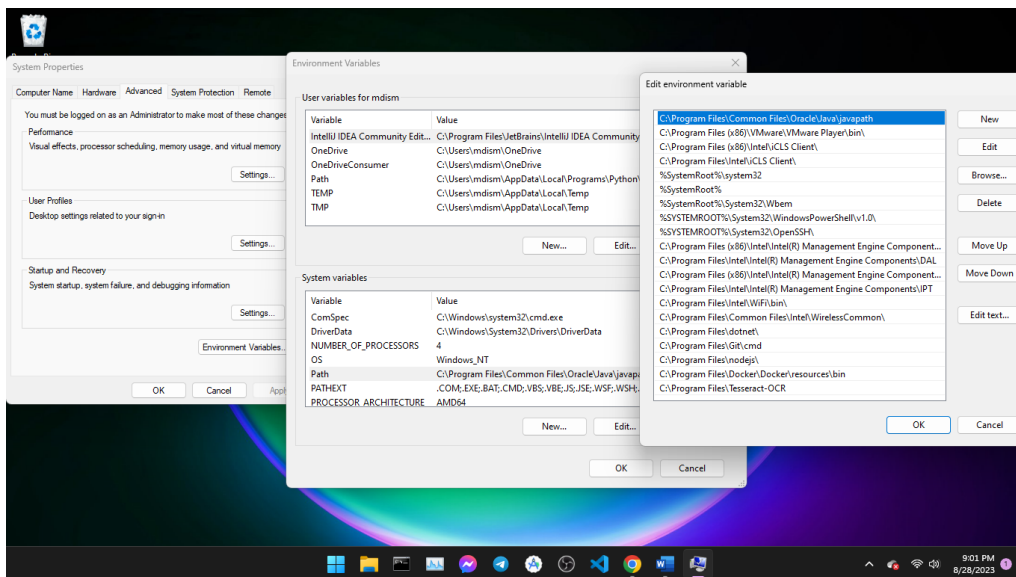

5. After clicking next again, the installation will do automatically and also the path will automatically set up on environment variables on windows. This is done of installation of JDK in windows.

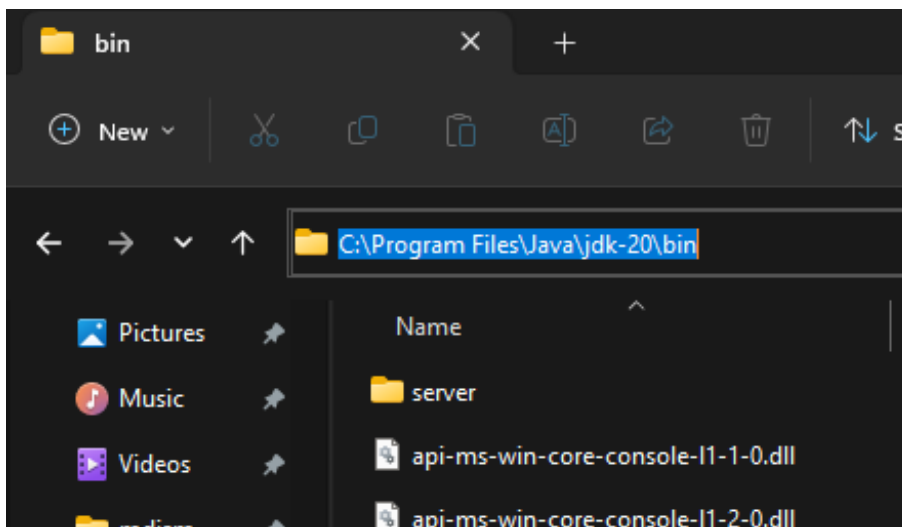

### 3. Set Environment Variable

In case the path of installation java not exist on Environment Variable, We need to set the path manually. We can check the path by searching environment from start menu.

In case it's not exists the we need to copy the Java installation binary path and add the path it on environment path.

Take a new environment variable and paste the path after then save and exit.
